Each item is scored from 1-5. Thus, scores for this inventory range from 4-20. A score of greater than 10 is considered positive.

**HITS: A Short Domestic Violence Screening Tool for Use in a Family Practice Setting**

*Kevin M. Sherin, MD, MPH; James M. Sinacore, PhD; Xiao-Qiang Li, MD; Robert E. Zitter, PhD; Amer Shakil, MD*

**Background and Objectives**: Domestic violence is an important problem that is often not recognized by physicians. We designed a short instrument for domestic violence screening that could be easily remembered and administered by family physicians.

**Methods**: In phase one of the study, 160 adult female family practice office patients living with a partner for at least 12 months completed two questionnaires. One questionnaire was the verbal and physical aggression items of the Conflict Tactics Scale (CTS). The other was a new four-item questionnaire that asked respondents how often their partner physically Hurt, Insulted, Threatened with harm, and Screamed at them. These four items make the acronym HITS. In phase two, 99 women, who were self-identified victims of domestic violence, completed the HITS.

**Results**: For phase one, Cronbach’s alpha was .80 for the HITS scale. The correlation of HITS and CTS scores was .85. For phase two, the mean HITS scores for office patients and abuse victims were 6.13 and 15.15, respectively. Optimal data analysis revealed that a cut score of 10.5 on the HITS reliably differentiated respondents in the two groups. Using this cut score, 91% of patients and 96% of abuse victims were accurately classified.

**Conclusions**: The HITS scale showed good internal consistency and concurrent validity with the CTS verbal and physical aggression items. The HITS scale also showed good construct validity in its ability to differentiate family practice patients from abuse victims. The HITS scale is promising as a domestic violence screening mnemonic for family practice physicians and residents.
HITS- A violence screening tool for domestic violence and intimate partner violence

History of early HITS tool development and research at UIC-Christ Hospital Residency in Illinois

Academic projects were developed at the UIC-Christ Family Practice Residency in 1996-2002 most notably including the development of a new domestic violence screening tool known as HITS. The tool was developed by the then UIC-Christ Family Practice Residency Program director, Kevin Sherin MD, MPH. The original research with the HITS instrument involved Dr's Zitter, Sinacore, Li and Shakil and validated the tool in several populations including the Family Practice Center population and domestic violence shelter populations. The UIC-Christ FPR website then stated that “The problem of domestic violence is foremost in the minds of many patients, and it is often unrecognized by health providers. Drs. Sherin, Zitter, Bardwell, Li, Shakil and Shannon are all involved in the series of “HITS” research phases. “HITS” is a four-item instrument used to screen for domestic violence. Please see “HITS: A Short Domestic Violence Screening Tool for Use in a Family Practice Setting,” Family Medicine, July-August 1998, pp. 508-512. Recently HITS Phase III was completed, and Phase IV is in the planning phase”. (The above history is from the UIC-Christ FPR website below: http://www.uic.edu/orgs/uiccfp/research.htm#History)

Other researchers using HITS

HITS is used globally now in China, Saudi Arabia, the Middle East, Africa, Europe, and South and North America. It has been validated for women in Spanish, and partner violence with males. In the US, the HITS tool is used or has been recommended by Kaiser Permanente Group of Northern California, The New Jersey Hospital Association, the Alaska Department of Health and Human Services, Parkland Hospital in Dallas, the Department of OB GYN at USF in Tampa, the CDC, and others. It has been translated into multiple languages including Mandarin Chinese and Arabic. Below are some of the US published researchers who are working with the HITS tool.

Dr Amer Shakil has continued the HITS research program in Texas at Texas Southwestern health center at Dallas.
Dr. Shakil has validated the HITS tool in Males, and is now working on a Pediatric Version Of HITS.

Link for Male HITS study at STFM site

Dr. Ping Hsin-Chen at the University of Medicine and Denistry of New Jersey has validated the HITS tool in Spanish populations.

HITS: a short domestic violence screening tool for use in a family practice...

BACKGROUND AND OBJECTIVES: Domestic violence is an important problem that is often not recognized by healthcare providers. Screening for domestic violence is important, but it is often not used in clinical settings.

Screening for domestic violence in a predominantly Hispanic population...

The utility of validated screening tools to detect abuse in diverse populations is critical. Reliability and validity of HITS were compared with the ISA-P and WAST.

English HITS was effective as a screening tool for domestic violence (P < 0.001). Given that no other screening tools will be used before HITS in actual practice, the utility of HITS is high.

HITS is a screening tool that is designed for outpatient clinical settings and consists of four questions based on the acronym for Hurt, Insult, Threaten, Scream (HITS).

Hurt, Insult, Threaten, Scream (HITS) screening tool was designed as a short domestic violence screening tool for use in a family practice.

New screening tools are briefer and more efficient than earlier devices. The HITS Scale (Hurt, Insult, Threaten, Scream; Table 2) is a practical 4-item tool.
